

BOOK NOW: OUR NEW TRAINING PROGRAM

Dear Max,

KLINGER Fluid Control is continuously working to enhance its customer service. For this reason, we would like to introduce you to our new training program.

YOUR CHALLENGES - OUR COMPETENCES

In this context, two different training modules are available for registration.

Module A imparts theoretical technical knowledge about our products and their application in a wide range of industries, while **Module B** provides a combination of theoretical knowledge and practical exercises on valves.

Both training modules are held in a specially created training center at KLINGER Fluid Control in Gumpoldskirchen, Austria.

Professional technical equipment and sufficient seating are provided for a comfortable theoretical training environment. For practical exercises on our products three workbenches are also set up directly in the training center.

Target Group training module A

Sales and marketing staff of sales partners and distributors, planners and design engineers from engineering and plant design offices (EPC), as well as interested employees of operating companies.

Target group training module B

Service technicians, maintenance personnel, assembly supervisors, technical sales representatives, and project managers.
