

## KHA NEW GENERATION: SEALING ELEMENT – ROBUST DESIGN:

The Klinger Ballostar elastic sealing element:

The one part disc design of the new standard FS sealing element combines elastic properties and **robust mechanical abilities**. An support ring is not needed anymore.

Also the already well known 2 part KFC sealing element with support ring show this advantages.

The seal ring for both designs is chambered from 3 sides (**protected**) from cover and support or one part disc for high stability and to avoid plastic deformation which is appropriate to **abrasive medias**.
