

# DO YOU KNOW...?

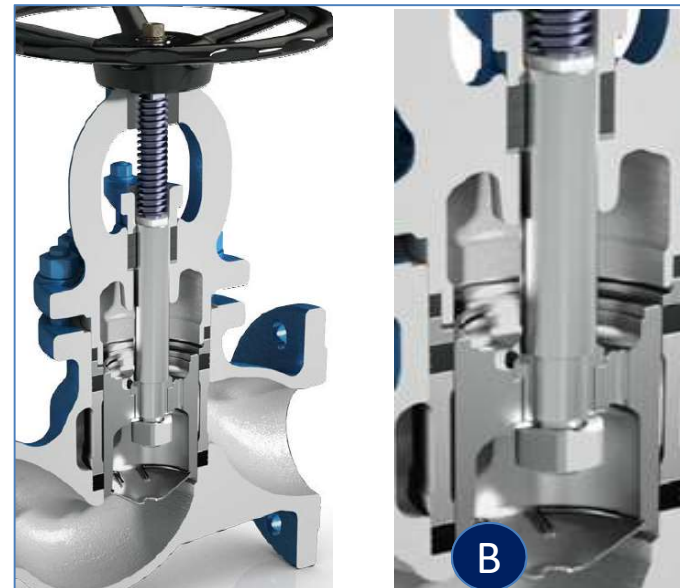

## KVN PISTON VALVE ADVANTAGES:

DN15 - 50

- » The valve rings (A) ensures a high sealing surface inline
- » Low and constant torque is guaranteed because there is no sealing seat – the piston is moving through the valve rings and lantern
- » Standard valve ring is valid up to 400°C and PN63

DN65 – 200 pressure balanced

- » Pressure balanced bonnet: media can come across the hollow piston (B) into the bonnet → pressure compensation.
- » The result is a much lower torque and easy operation
